Subject: Power Meter
[Power Meter Energy Scout.pdf](#)

Hi Michael,

Gary Lubbers researched this meter (specifications attached) for monitoring the WaterGen's power consumption. The meter has an RS-485 port so that we can trap the data with our NexSens data acquisition system. We should be able to read total kilowatt hours and calculate the cost of running this unit per liter of water produced. Gary worked with Rob at Schlemmer Associates so feel free to ask for Rob when you call to order, thanks!
